

SRIKATHYAYANI (KATHYAYANI) SRIKANTESWARA, Ph.D.

Portland, OR | 408-712-6082 | srikathyayani.srikanteswara@gmail.com

Linked in: <https://www.linkedin.com/in/kathyayani-srikanteswara-ph-d-a11b119/>

Objective: Seeking a Full Time Position as a **Director at** a growth-oriented firm in Machine Learning & Data Science

Summary: Extensive 20+ years of multidisciplinary Wireless and AI Senior Leadership experience creating first of its kind technologies and products for the market with over 90 patents and 70+ publications. Experienced in managing technical programs from strategy at executive level to executing and delivering with large internationally distributed teams. Have led multi-million dollar government contracts from requirements to on-time delivery.

Areas of Experience: AI/ML, AI Governance, Wireless Comms, Networking, Technical Strategy, Executive Comms (including at CEO Level of Fortune 500 Company), Engineering and Product Management

EXPERIENCE

Gen AI & Machine Learning Product Consultancy | Founder & AI Product Advisor **Oct 2024 - Present**

- Advise startups, research organizations, and enterprise customers on AI product strategy, roadmap development, market positioning, and commercialization of AI-enabled solutions.
- Developed product roadmap and go-to-market strategy for an AI startup targeting telecommunications customers, aligning customer requirements with AI capabilities and business objectives.
- Led development and evaluation of AI solutions spanning AI agents, Large Language Models (LLMs), computer vision, predictive analytics, recommendation systems, and AI for disease identification
- Collaboration with New Mexico State University NSOL Lab on secure AI, agent frameworks, distributed AI systems, and next-generation intelligent infrastructure, graduate student advising
- Mentored and organized AI upskilling and Entrepreneurship Programs with Oregon Worksystems

Intel Corporation, Portland, OR, Principal Engineer

2005-2024

AI/LLM and Security Product Strategy and Execution

- **Defined use cases, roadmap, and technical strategy** for applying LLMs to wireless security analysis, enabling automated detection of protocol vulnerabilities and influencing future security enhancements in global wireless standards (3GPP)
- **Led Intel's MLWiNs multi-university initiative on distributed AI/ML for the network edge**, shaping product and research directions for collaborative inference and training across intelligent vehicles and connected edge systems
- **Developed Roadmap for use of LLMs for network optimization** that spurred multiple novel research topics like security and policy compliance during network optimization, implications of **Security and AI Regulations in US and EU** including GDPR, translation of higher layer policies at the protocol layer to lower layers in the implementation. Presented use of AI in wireless networks at IEEE Conferences.
- **Received Best Paper Award for co-developing SCLERA**, a privacy-preserving Edge AI framework that leveraged distributed inference, trusted execution environments, and intelligent workload partitioning to enable secure, low-latency AI services at the network edge.

Strategic Leadership & Vision with Innovation and Thought Leadership

- **Developed Product Strategy, Roadmap and adoption plan for Intel's Investment in New Networking Technology with approval from CEO. Identified Value Proposition of technology was Contrary to popular thinking.**
- **Developed Intel's Spectrum Sharing Policy and Productization Roadmap at Exec Level. Performed Stakeholder Management giving Intel the lead in Standards and IP:** Presented to Intel CEO on Technical Long-Term Strategy and executed vision for cloud-based spectrum management with AI, that leveraged Intel's core strengths for better user experience.
 - Secured Intel's lead in Licensed Shared Access (LSA) Standard in Europe
 - Developed key IP in 3.5 GHz shared spectrum. Contributed to the standardization of 3.5GHz protocols
- **Developed and Executed Roadmap to speed up (by almost a year) opening up of 600MHz band with T-mobile and other companies. Managed team and stakeholders to define tasks, requirements definition and analysis. Effort paved the way for Intel modems.** Received an award.
- **Developed and Executed Strategy for Post Quantum Crypto (PQC) Transition in 6G.** Identified security gaps for 6G. Developed a plan and led execution of PoC demonstrating 80-90% overhead reduction with E2E fine-grained security

- **Developed first WiFi Product that supported video streaming in presence of interferers:** Developed seminal IP for avoiding interference from non-WiFi devices and achieved 97% throughput improvement.

Company Wide Innovation and Technical Program Management

- **Developed and Managed Program to deliver First of its kind POC on Secure Network Slicing (RAN + Core) for 5G for a Federal Customer.** Developed Requirements, Task definitions and Budget with customer and managed a team of 20+ researchers, S/W engineers and sub-contracting institutes to successfully deliver PoC on time for multi-million-dollar contract. Led open-source release of the Secure Network Slicing software stack, coordinating engineering, legal, and program stakeholders to enable broader ecosystem adoption and collaboration.
 - Pioneered the demonstration of Intel SGX Trusted Execution Environments (TEE) and remote attestation to ensure confidentiality/ integrity of network functions.
- **Developed product for US DoD in Intelligent Secure Edge Computing and Dynamic Orchestration with Large Scale Deployment:** Developed timely solution needed for DoD customers that filled the gaps of Kubernetes at the Edge.
 - Developed distributed compute orchestration that showed 2x gain (in share of received compute results) on congested highways and showcased ~6X improvement in downloading microservices from nearby devices Vs. cloud in Industrial and IoT networks.
 - Demonstrated automatic load balancing, real-time service composition when resources change every 5 secs.
- **Initiated Joint Intel/NSF Center for Information Centric Networking (ICN)– Wireless Edge Networks, Managed all stages** from RFP Creation, Proposal Reviews, Research Portfolio Management to Tech Transfer with 12+ universities.

ECOSYSTEM, INDUSTRY & THOUGHT LEADERSHIP

- **Advised Intel on potential acquisitions of Content Delivery Network (CDN) companies** as a SME
- As an IEEE standard liaison aligned standard and SIG activities with Intel's product and legal priorities
- Initiated and managed across geos, spectrum sharing research including use of **AI for spectrum management**
- **Developed Intel's official spectrum sharing policy with the Legal Team** that guides all external interactions.

Research Scientist – Technical Strategy, Product Management, Algorithms

2005-2007

- **Drove Intelligent Platform Power Optimization Using High Level Context Information into Intel Modem Group** Won Intel Labs' Research Velocity Challenge and led team to develop a Fine-grained Event-based Modem Power Model for Energy Drain. Solutions to reduce modem power in cell-edge using high level context information.
- Developed algorithms for location estimation, prediction of routes and user habits based on WiFi data.

ADDITIONAL EXPERIENCE

Navsys Corporation, Research Engineer II, Colorado Springs, CO 2004 - 2005

Virginia Tech, Research Professor, Blacksburg, VA 2001 – 2004

Wireless @ Virginia Tech, Senior Graduate Research Assistant, Blacksburg, VA 1997 – 2001

TECHNICAL ACTIVITIES

- Invited by FCC in 2014 to their spectrum sharing workshop to present technology recommendations.
- Key role in Women's PE and Fellow's Forum (WPEFF) organizing the Technical Symposiums.
- Associate Editor, IEEE Communication Magazine.
- Regularly serves as Technical Program Committee (TPC) Member and Chair for various conferences.
- Made Technology Recommendations for the SDR Forum based from 2002 – 2004.

EDUCATION

MIT Professional Education Certification in AI & Data Science: Leveraging AI for Effective Decision-Making

Ph.D. Electrical Engineering, (Wireless Communications), Virginia Tech.

Dissertation Title: Design and Implementation of a Software Radio Architecture for Reconfigurable Platforms

Master of Science, Electrical Engineering, Computer vision and image procession, Virginia Tech

Bachelor of Technology, Electrical Engineering, First Class with Honors

Indian Institute of Technology (IIT), Banaras Hindu University, Varanasi, India
